

**ADDITIONAL SUBMITTAL MATERIALS FOR
Land Use Application Package**

Paint Booth Installation

**Camping World
3801 West Chelsea Road, Monticello MN**

Additional narrative

Included in the attached link are drawings for the booth along with the CAD files. The booth will be placed next to the building with the exhaust and roll up door in the front, the AMU will be in the back right corner. Placement should be 4' from back wall and 3' from side wall. The new personnel door will be attached to the booth on the front left side going into the existing building, approx. 8' in from the front of the building, then we will use a vestibule or breezeway to connect them. We will NOT be utilizing any exist fire exits for the access door.

Exterior wall facing Chelsea Road

We understand that there is a concern regarding the exterior wall facing Chelsea Road and we suggest Camping World will spray the exterior wall with EFIS Stucco which is currently on the exterior of another building on site. EFIS Stucco is External Insulation and Finishing Systems and uses layers that add in synthetic materials. The first layer is comprised of a polystyrene foam board. Then, that is followed by a fiberglass mesh and a finishing coat

Local architect

We have had the paint booth installer, Jeff Syvrud of Platinum Equipment, LLC engage a local architect, Truman Howell Architects, who we understand has experience locally and can provide the required drawings and information of the paint booth installation
